

LKM cable trunking: Reliable protection for cables

With optimised edge protection rings

Optimised edge protection rings with improved functionality can be installed at a later date – even in trunking that is already filled with cables.

- Available in ten different trunking sizes with two surface versions: FS strip galvanised and FSK strip galvanised and plastic coated in pure white
- The equipotential bonding between the cover and base and between the trunking lengths is guaranteed without the use of additional connection cables.
- Accessories available for vertical and horizontal mounting, as well as for mounting on the ceiling.
- Edge protection rings, which are also suitable for easy retroinstallation, and end pieces made of plastic
- The trunking of types LKM 20030 and LKM 60100 have also been tested as a cable-specific routing type for the maintenance of electrical function according to DIN 4102 Part 12.
